

apa's refreshed suite of services

31 January 2018

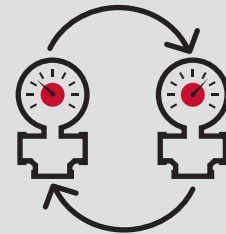

our service refresh

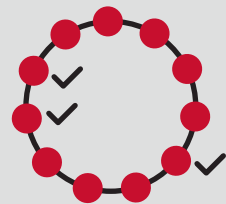

At APA we strive to continually enhance our offering to better address our customers' increasingly complex and dynamic gas transportation needs. We have therefore refreshed the suite of services available on our **East Coast Grid and Central Region pipelines**, to provide greater flexibility, transparency and ease of access to our services. You will have:

More options for shorter term capacity reservation.

The ability to trade gas and pipeline capacity with access to services.

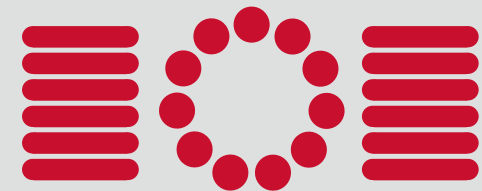

Increased choice from a range of simpler and more flexible service offerings.

Better pricing through the removal or reduction of most ancillary fees and charges from both existing and future contracts.

- ✓ Clarity
- ✓ Greater flexibility
- ✓ Transparency
- ✓ Ease of access
- ✓ Gas market liquidity
- ✓ Reliable service for demand centres
- ✓ Seamless connection

On the following pages we've provided a guide to our refreshed suite of services which you can access through our [services menu](#)

SERVICES MENU

In pipe trade

Receipt and delivery of gas to facilitate trade of gas between shippers at specified points, also referred to as commodity title transfer.

This innovative service allows any gas quantities received into the pipeline to be traded irrespective of the physical receipt point. The service also provides flexibility for shippers to source and trade gas on both a long and short term basis. Customers subsequently transfer and manage the flows of gas related to those trades via the APA customer information portal (APA Grid), using normal nomination processes.

The seller and buyer of gas bilaterally negotiate the terms of the sale and purchase of gas. The buyer and seller are then able to manage the receipt and delivery of gas that has been traded at virtual receipt and delivery points on the pipeline using the In-Pipe Trade service.

The service provides for the creation of virtual receipt points (e.g. R3 & R4) and virtual delivery points (e.g. D3 & D4) between shippers, as depicted in Figure 1.

Note: APA is progressively rolling out in-pipe trade service capability on all key pipelines. APA will prioritise the rollout in accordance with customer demand.

Operational capacity transfer

Transfer of firm service operational MDQ between shippers – pipeline capacity trade.

Pipeline capacity refers to the right to transport gas through a transmission pipeline. APA is the first Australian pipeline company to offer a streamlined service for the transfer of capacity between shippers (users of gas transportation services). This service provides benefits to shippers by simplifying the implementation of trades, preserving confidentiality and eliminating the need for lengthy negotiations.

To facilitate this trading process, APA has created a public web site where shippers can advertise the quantity of capacity that they want to buy or sell. The web site is updated daily and also includes current and historical trading information and pipeline utilisation information. Visit the web site at <http://capacitytrading.apa.com.au>

Note: APA is progressively rolling out operational capacity transfer service capability on all key pipelines. APA will prioritise the rollout in accordance with customer demand.
