

Carpentaria Gas Pipeline

Receipt and Delivery Points

Receipt Points

Name	Location	Pressure (kPa)	Physical Capacity (GJ/Day) [see note 1]	Zone [see note 2]
Queensland Gas Centre, Ballera	The centre of the orifice plate used to measure gas entering the CGP from the Santos Compressor Facility	Minimum: 10,500 Maximum: 14,800	119,000	CGP-RZ-01
Northern Gas Pipeline Receipt Point	The point of interconnection between the Northern Gas Pipeline and the CGP	Minimum: 6,500 Maximum: 13,500	92,000	CGP-RZ-02
CGP In-Pipe Trade Point	A virtual point notionally located within the CGP adjacent to the Ballera Gas Centre	Not Applicable	Not Applicable	CGP-RZ-01

Carpentaria Gas Pipeline

Receipt and Delivery Points

Delivery Points

Name	Location	Pressure (kPa)	Physical Capacity (GJ/Day) [see note 1]	Temperature (°C)	Zone [see note 2]
SWQP Delivery Point	The point of interconnection between the CGP and the South West Queensland Pipeline	Minimum: 6,000 Maximum: 14,800	20,000	Minimum: 2 Maximum: 50	CGP-DZ-01
Osborne Meter Station	Osborne Mine off-take at GDA 94 The downstream flange of the riser at the off-take from the Pipeline.	Minimum: 5,000 Maximum: 9,900	3,000	Minimum: 2 Maximum: 50	CGP-DZ-03
Cannington Meter Station	Upstream face of the inlet flange on the Cannington (mine) Meter Station	Minimum 2,000 Maximum: 9,900	14,500	Minimum: 2 Maximum: 50	CGP-DZ-03
Phosphate Hill	The downstream flange of the meter equipment at the Phosphate Hill offtake from the CGP.	Minimum 2,000 maximum 14,800	42,300	Minimum: 2 Maximum: 50	CGP-DZ-02

Carpentaria Gas Pipeline

Receipt and Delivery Points

Mica Creek Meter Station - Diamantina Power Station	The outlet flange of the first valve downstream of the Mica Creek Gas Gate Station connected to the lateral pipeline connecting the Mica Creek Gas Gate Station to Diamantina Power Station lateral pipeline	Minimum 3,000 Maximum 4,640	67,000	Minimum: 2 Maximum: 50	CGP-DZ-04
Mica Creek Meter Station - Mica Creek Power Station	The outlet flange of the first valve downstream of the Mica Creek Gas Gate Station connected to the lateral pipeline connecting the Mica Creek Gas Gate Station to Mica Creek Power Station	Minimum 3,000 Maximum 4,640	104,000	Minimum: 2 Maximum: 50	CGP-DZ-04
Mica Creek Meter Station - Town Lateral Pipeline	The outlet flange of the first valve downstream of the Mica Creek Gas Gate Station connected to the pipeline known as the	Minimum 3,000 Maximum 4,640	20,900	Minimum: 2 Maximum: 50	CGP-DZ-04

Carpentaria Gas Pipeline

Receipt and Delivery Points

	Town Lateral Pipeline				
CGP In-Pipe Trade Point	A virtual point notionally located within the CGP adjacent to the Ballera Gas Centre	Not Applicable	Not Applicable	Not Applicable	CGP-DZ-01

Note 1: Hourly Physical Capacity unless otherwise stated is the Physical Capacity at the point divided by 24 and multiplied by the MHQ Factor for the Facility as set out in Schedule 10 of the Facility Specific Terms.

Note 2: Zones descriptions are accurate as at January 2019, however are subject to change in accordance with the National Gas Rules. The zone information published in the AEMO Transportation Service Point Register prevails in the event of an inconsistency.
